

Solve the following triangles:

(1.)  $A = 75^\circ$  ;  $c = 21$

Here is the diagram:

(i.)  $\sin 75 = a/21$                       use this trig equation

$a/21 = \sin 75$                       rearrange like this

$a = 21 \sin 75$                       multiply each side by 21, cancel

$a = 20$                       use calculator and round

(ii.)  $\cos 75 = b/21$                       use this trig equation

$b/21 = \cos 75$                       just rearrange like this

$b = 21 \cos 75$                       multiply each side by 21, cancel

$b = 5.4$                       use calculator and round

(iii.)  $A + B + C = 180$                       use the triangle sum theorem

$75 + B = 90 = 180$                       make substitutions

$B + 165 = 180$                       combine like terms

$$\frac{-165}{B} = \frac{-165}{15} \quad \text{subtract 165 from each side}$$

subtract

results:  $A = 75$  ;  $B = 15$  ;  $C = 90$

$$a = 20 \quad ; \quad b = 5.4 \quad ; \quad c = 21$$

(2.)  $B = 52^\circ$  ;  $a = 32$

Here is the diagram:

(i.)  $\cos 52 = 32/c$  use this trig equation

$$c \cos 52 = 32 \quad \text{multiply each side by } c, \text{ cancel}$$

$$\frac{c \cos 52}{\cos 52} = \frac{32}{\cos 52} \quad \text{divide each side by } \cos 52$$

$$c = 52 \quad \text{use calculator, round, and cancel}$$

(ii.)  $\tan 52 = b/32$  use this trig equation

$$b/32 = \tan 52 \quad \text{just rearrange like this}$$

$$b = 32 \tan 52 \quad \text{multiply each side by } 32, \text{ and cancel}$$

$$b = 41 \quad \text{use calculator, round, and cancel}$$

(iii.)  $A + B + C = 180$  use the triangle sum theorem

$A + 52 + 90 = 180$  make substitutions

$A + 142 = 180$  combine like terms

$- 142 \quad -142$  subtract 142 from each side

$$\begin{array}{r} \hline A \quad = \quad 38 \end{array} \quad \text{subtract}$$

results:  $A = 38$  ;  $B = 52$  ;  $C = 90$

$a = 32$  ;  $b = 41$  ;  $c = 52$

(3.)  $A = 35^\circ$  ;  $c = 20$

Here is the diagram:

(i.)  $\sin 35 = a/20$  use this trig equation

$a/20 = \sin 35$  just rearrange like this

$a = 20 \sin 35$  multiply each side by 20, cancel

$$a = 11.5 \quad \text{use calculator, round, and cancel}$$

$$(ii.) \quad \cos 35 = b/20 \quad \text{use this trig equation}$$

$$b/20 = \cos 35 \quad \text{just rearrange like this}$$

$$b = 20 \cos 35 \quad \text{multiply each side by 20 and cancel}$$

$$b = 16.4 \quad \text{use calculator, round, and cancel}$$

$$(iii.) \quad A + B + C = 180 \quad \text{use the triangle sum theorem}$$

$$35 + B + 90 = 180 \quad \text{make substitutions}$$

$$B + 125 = 180 \quad \text{combine like terms}$$

$$\begin{array}{r} -125 \quad -125 \\ B + 125 = 180 \\ \hline B = 55 \end{array} \quad \begin{array}{l} \text{subtract 125 from each side} \\ \text{subtract} \end{array}$$

$$\hline B = 55 \quad \text{subtract}$$

$$\text{results: } A = 35; \quad B = 55; \quad C = 90$$

$$a = 11.5 \quad ; \quad b = 16.4 \quad ; \quad c = 20$$

$$(4.) \quad B = 81^\circ \quad ; \quad c = 40$$

Here is the diagram:

(i.)  $\sin 81 = b/40$  use this trig equation

$b/40 = \sin 81$  just rearrange like this

$b = 40 \sin 81$  multiply each side by 40, cancel

$b = 39.5$  use calculator and round

(ii.)  $\cos 81 = a/40$  use this trig equation

$a/40 = \cos 81$  just rearrange like this

$a = 40 \cos 81$  multiply each side by 40, cancel

$a = 6.257$  use calculator, round, and cancel

(iii.)  $A + B + C = 180$  use the triangle sum theorem

$A + 81 + 90 = 180$  make substitutions

$A + 171 = 180$  combine like terms

$-171 \quad -171$  subtract 171 from each side

---

$A \quad \quad \quad = 9$  subtract

results:  $A = 9$  ;  $B = 81$  ;  $C = 90$

$a = 6.257$  ;  $b = 39.5$  ;  $c = 40$

(5.)  $B = 15^\circ$  ;  $c = 16$

Here is the diagram:

(i.)  $\sin 15 = b/16$  use this trig equation

$b/16 = \sin 15$  just rearrange like this

$b = 16 \sin 15$  multiply each side by 16, cancel

$b = 4$  use calculator, round, and cancel

(ii.)  $\cos 15 = a/16$  use this trig equation

$a/16 = \cos 15$  just rearrange like this

$a = 16 \cos 15$  multiply each side by 16, cancel

$a = 15.5$  use calculator, round, cancel

(iii.)  $A + B + C = 180$  use the triangle sum theorem

$A + 15 + 90 = 180$  make substitutions

$A + 105 = 180$  combine like terms

$-105 \quad -105$  subtract 105 from each side

---

$A = 75$  subtract

results:  $A = 75$  ;  $B = 15$  ;  $C = 90$

$$a = 15.5 \quad ; \quad b = 4; \quad c = 16$$

$$(6.) \quad A = 41^\circ \quad ; \quad b = 3$$

Here is the diagram:

$$(i.) \quad \tan 41 = a/3 \quad \text{use this trig equation}$$

$$a/3 = \tan 41 \quad \text{just rearrange like this}$$

$$a = 3 \tan 41 \quad \text{multiply each side by 3 and cancel}$$

$$a = 2.6 \quad \text{use calculator and round}$$

$$(ii.) \quad \cos 41 = 3/c \quad \text{use this trig equation}$$

$$c \cos 41 = 3 \quad \text{multiply each side by c and cancel}$$

$$\frac{c \cos 41}{\cos 41} = \frac{3}{\cos 41} \quad \text{divide each side by } \cos 41$$

$$c = 4 \quad \text{use calculator and cancel and round}$$

$$A + B + C = 180 \quad \text{use the triangle sum theorem}$$

$$41 + B + 90 = 180 \quad \text{make substitutions}$$

$$B + 131 = 180 \quad \text{combine like terms}$$

$$\begin{array}{r} -131 \quad -131 \\ \hline B \quad = \quad 49 \end{array} \quad \begin{array}{l} \text{subtract 131 from each side} \\ \\ \text{subtract} \end{array}$$

results:  $A = 41$  ;  $B = 49$ ;  $C = 90$

$$a = 2.6 \quad ; \quad b = 3; \quad c = 4$$

Solve the following triangle:

(7.)

(i.)  $\cos 30 = BD/10$  use this trig equation

$BD/10 = \cos 30$  just rearrange like this

$BD = 10 \cos 30$  multiply each side by 10 and cancel

$BD = 8.7$  use calculator, round

(ii.)  $\sin 30 = CD/10$  use this trig equation

$CD/10 = \sin 30$  just rearrange like this

$CD = 10 \sin 30$  multiply each side by 10, cancel

$$CD = 5 \quad \text{use calculator}$$

$$(iii.) \quad \tan 30 = AC/10 \quad \text{use this trig equation}$$

$$AC/10 = \tan 30 \quad \text{just rearrange like this}$$

$$AC = 10 \tan 30 \quad \text{multiply each side by 10 and cancel}$$

$$AC = 5.8 \quad \text{use calculator and round}$$

$$(iv.) \quad \sin 30 = AD/AC \quad \text{use this trig equation to find AD}$$

$$AC \sin 30 = AD \quad \text{multiply each side by AC and cancel}$$

$$AD = 5.8(0.5) \quad \text{rearrange and make substitutions}$$

$$AD = 2.9 \quad \text{multiply}$$

$$DCB + CBD + BDC = 180 \quad \text{use the triangle sum theorem}$$

$$DCB + 30 + 90 = 180 \quad \text{make substitutions}$$

$$DCB + 120 = 180 \quad \text{combine like terms}$$

$$\begin{array}{r} -120 \quad -120 \\ DCB + 120 = 180 \\ \hline DCB = 60 \end{array} \quad \text{subtract 120 from each side}$$

$$DCB = 60 \quad \text{subtract}$$

$$(v.) \quad ACD = 30 \quad [\text{the complement of } 60]$$

(8.) A bridge joins two points, B and C, on the opposite banks of a river. A highway engineer stands at point A, 300 feet from point C, and measures  $\angle CAB$  to be  $36^\circ$ . Find the length of the line of sight from the engineer to point B on the opposite bank of the river.

Here is the diagram:

Let  $c = AB$

$\cos 36 = 300/c$  use this trig equation

$c \cos 36 = 300$  multiply each side by  $c$  and cancel

$\frac{c \cos 36}{\cos 36} = \frac{300}{\cos 36}$  divide each side by  $\cos 36$

$c = 370.8$  use calculator, round, and cancel

$AB = 370.8$  replace  $c$  with  $AB$

result:  $AB = 370.8$

(9.) The distance  $AB$  can be found by placing stakes at  $A$ ,  $B$ , and  $C$  in such a way as to make  $\angle A$  a right angle, and by measuring  $AC$  and  $\angle C$ .  $AC$  is 532 meters and  $C$  is  $42^\circ$ .

How long is  $AB$ ?

Here is the diagram:

$$\tan 42 = AB/532 \quad \text{use this trig equation}$$

$$532 \tan 42 = AB \quad \text{multiply each side by 532}$$

$$AB = 532 \tan 42 \quad \text{rearrange like this}$$

$$AB = 479 \quad \text{use calculator and round}$$

(10.) A guy wire 40 meters long runs from the ground to the top of a pole. It makes a  $64^\circ$  angle with the line drawn to the foot of the pole. Find the height of the pole.

Here is the diagram:

$\sin 64 = h/40$  use this trig equation

$h/40 = \sin 64$  just rearrange like this

$h = 40 \sin 64$  multiply each side by 40 and cancel

$h = 36$  use calculator and round

- (11.) The railroad that runs to the summit of Pikes Peak makes, at the steepest place, a  $27^\circ$  angle with the horizontal. How many meters would you rise in going 400 meters up this track?

Here is the diagram:

$\sin 27 = h/400$                       use this trig equation

$h/400 = \sin 27$                       just rearrange like this

$h = 400 \sin 27$                       multiply each side by 400, cancel

$h = 181.6$                       use calculator and round

(12.) A ladder 6 meters long leans against a building and makes an angle of  $68^\circ$  with the ground. How far from the building is the base of the ladder?

Here is the diagram:

$$\sin 68 = b/6 \quad \text{use this trig equation}$$

$$b/6 = \sin 68 \quad \text{just rearrange like this}$$

$$b = 6 \sin 68 \quad \text{multiply each side by 6, cancel}$$

$$b = 5.56 \quad \text{multiply and round ; use calculator}$$

- (13.) A balloon is anchored at point E by a cable. The cable makes an angle of  $52^\circ$  with the ground. Point D, on the ground directly under the balloon, is 265 feet from E. Find the length of the cable.

Here is the diagram:

$$\cos 52 = 265/c \quad \text{use this trig equation}$$

$$c \cos 52 = 265 \quad \text{multiply each side by } c, \text{ cancel}$$

$$\frac{c \cos 52}{\cos 52} = \frac{265}{\cos 52} \quad \text{divide each side by } \cos 52$$

$$c = 430.4 \quad \text{use calculator and round}$$

(14.) An 8 meter pole is leaning against a tree. The pole makes an angle of  $34^\circ$  with the tree. Find the distance from the foot of the pole to the foot of the tree.

Here is the diagram:

$$\cos 34 = b/8 \quad \text{use this trig equation}$$

$$b/8 = \cos 34 \quad \text{rearrange like this}$$

$$b = 8 \cos 34 \quad \text{multiply each side by 8, cancel}$$

$$b = 6.6 \quad \text{use calculator and round}$$

(15.) A tree is broken by the wind. The top of the tree touches the ground 13 meters from the base and makes

an angle of  $29^\circ$  with the ground. Find the original height of the tree.

Here is the diagram:

(i.)  $\tan 29 = b/13$  use this trig equation to find b

$b/13 = \tan 29$  just rearrange like this

$b = 13 \tan 29$  multiply each side by 13, cancel

$b = 7.2$  use calculator and round

(ii.)  $\cos 29 = 13/c$  use this trig equation to find c

$c \cos 29 = 13$  multiply each side by c, cancel

$\frac{c \cos 29}{\cos 29} = \frac{13}{\cos 29}$  divide each side by  $\cos 29$

$c = 15$  use calculator, round, cancel

(iii.)  $b + c$  use this expression to find

the original height of the tree

$$= 7.2 + 15 \quad \text{make substitutions}$$

$$= 22.2 \quad \text{add}$$
