

(1.) From the top of a cliff 800 meters high, the angle of depression to the base of a log cabin is 37° . Find the distance from the cabin to the foot of the cliff.

Here is the diagram:

$$\tan 37 = 800/d \quad \text{use this trig equation}$$

$$d \tan 37 = 800 \quad \text{multiply each side by } d, \text{ cancel}$$

$$\frac{\quad}{\tan 37} \quad \frac{\quad}{\tan 37} \quad \text{divide each side by } \tan 37$$

$$d = 1061.6 \quad \text{use calculator and cancel}$$

(2.) An airplane over the Atlantic Ocean is 150,000 feet from shore. The angle of depression of the shore is 13° . Find the altitude, h , of the plane.

Here is the diagram:

$$\sin 13 = h/150,000 \quad \text{use this trig equation}$$

$$h/150,000 = \sin 13 \quad \text{just rearrange like this}$$

$$h = 150,000 \sin 13 \quad \text{multiply each side by 150,000, cancel}$$

$$h = 33,742.658 \quad \text{use calculator}$$

- (3.) A building casts a shadow of 160 feet. From the end of the shadow the angle of elevation of the sun is 36° . Find the height of the building.

Here is the diagram:

$$\tan 36 = h/160 \quad \text{use this trig equation}$$

$$h/160 = \tan 36 \quad \text{just rearrange like this}$$

$$h = 160 \tan 36 \quad \text{multiply each side by 160, and cancel}$$

$$h = 116 \quad \text{use calculator}$$

(4.) Two mountain stations are connected by a cable car.

The angle of depression of the cable is 50° . The vertical distance between the stations is 1417 meters.

Find the length of the cable.

Here is the diagram:

$$\sin 50 = 1417/c \quad \text{use this trig equation}$$

$$c \sin 50 = 1417 \quad \text{multiply each side by c and cancel}$$

$$\frac{c \sin 50}{\sin 50} = \frac{1417}{\sin 50} \quad \text{divide each side by } \sin 50$$

$$c = 1850 \quad \text{use calculator and cancel}$$

- (5.) A flagpole casts a shadow 18.2 meters long. From the end of the shadow, the angle of elevation of the sun is 22° . Find the height of the flagpole.

Here is the diagram:

$$\tan 22 = h/18.2 \quad \text{use this trig equation}$$

$$h/18.2 = \tan 22 \quad \text{just rearrange like this}$$

$$h = 18.2 \tan 22 \quad \text{multiply each side by 18.2, cancel}$$

$$h = 7.35 \quad \text{use calculator}$$

- (6.) The Hirsch Building and the County Hospital are 38 meters apart. From a window in the Hirsch Building, the angle of elevation of the top of the hospital is 73° . From the same window the angle of depression of the ground at the base of the hospital is 64° . Find the height of the

hospital.

Here is the diagram:

$$\tan 64 = a/38 \quad \text{use this trig equation}$$

$$a/38 = \tan 64 \quad \text{just rearrange like this}$$

$$a = 38 \tan 64 \quad \text{multiply each side by 38, cancel}$$

$$a = 78 \quad \text{use calculator}$$

$$\tan 73 = b/38 \quad \text{use this trig equation}$$

$$b/38 = \tan 73 \quad \text{just rearrange like this}$$

$$b = 38 \tan 73 \quad \text{multiply each side by 38, cancel}$$

$$b = 124.3 \quad \text{use calculator}$$

$$h = a + b \quad \text{use this equation to find h}$$

$$h = 78 + 124.3 \quad \text{make substitutions}$$

$$h = 202.3 \quad \text{add}$$

(7.) Two boats are observed from a tower 75 meters above a lake. The angles of depression are 12.5° and 7° . How far apart, to the nearest meter, are the boats?

Here is the diagram:

$$\tan 12.5 = 75/a \quad \text{use this trig equation to find a}$$

$$a \tan 12.5 = 75 \quad \text{multiply each side by a, cancel}$$

$$\frac{\quad}{\tan 12.5} \quad \frac{\quad}{\tan 12.5} \quad \text{divide each side by } \tan 12.5$$

$$a = 338.3 \quad \text{use calculator and cancel}$$

$$\tan 7 = 75/b \quad \text{use this trig equation to find b}$$

$$b \tan 7 = 75 \quad \text{multiply each side by b, cancel}$$

$$\frac{\quad}{\tan 7} \quad \frac{\quad}{\tan 7} \quad \text{divide each side by } \tan 7$$

$$b = 611 \quad \text{use calculator and cancel}$$

$$d = a + b \quad \text{use this equation to find } d$$

$$d = 338.3 + 611 \quad \text{make substitutions}$$

$$d = 949.3 \quad \text{add}$$

- (8.) An aviator observes the measure of the angle of depression of a marker to be 36° . The plane is 2000 meters above the ground. How far from the marker is the point on the ground directly under the plane?

Here is the diagram:

$$\tan 36 = 2000/d \quad \text{use this trig equation}$$

$$d \tan 36 = 2000 \quad \text{multiply each side by } d, \text{ cancel}$$

$$\frac{\quad}{\tan 36} \quad \frac{\quad}{\tan 36} \quad \text{divide each side by } \tan 36$$

$d = 2752.76384$ use calculator and cancel

(9.) A camp director wishes to buy a new rope for a flagpole at the camp. At a point 4 meters from the foot of the pole, she measures the angle of elevation to the top of the pole and found it to be 82° . What length rope should she buy if she wants it to be double the distance from the top of the pole to the spot from which she measured the angle?

Here is the diagram:

$\cos 82 = 4/r$ use this trig equation to find r

$r \cos 82 = 4$ multiply each side by r and cancel

$\frac{r \cos 82}{\cos 82} = \frac{4}{\cos 82}$ divide each side by $\cos 82$

$$r = 28.7 \quad \text{use calculator and cancel}$$

$$2r = 2(28.7) = 57.4 \quad \text{multiply by 2}$$

result: she should buy a 57.4 meter rope.

(10.) At a point 5 meters from the base of a building, the angle of elevation of the top of the building is 80° .

Find the height of the building.

Here is the diagram:

$$\tan 80 = h/5 \quad \text{use this trig equation}$$

$$h/5 = \tan 80 \quad \text{just rearrange like this}$$

$$h = 5 \tan 80 \quad \text{multiply each side by 5, cancel}$$

$$h = 28.3564$$
